Here is a newer Beta version of the android app. Has a fix for the timeout errors when loading telemetries.
More features coming soon.... Stay tuned.

https://guhlmotors.com/wp-content/uploads/2023/12/WiDefyAppAndroid.zip

This is a prototype android app for the WiDefy.
You can setup the network credentials, WiDefy name and password.
You can download and email telemetry files and delete telemetry files.
for best results, be sure to install the latest version of firmware onto the WiDefy using the MorDefy software.
There is more to come with this app. I'm just looking for some feedback with any issues questions or problems.

This app will need to be unzipped and "sideloaded" on the android device. Here is a website that has info on how to sideload.
